

Frequency table: Frequency table consist of both numerical and categorical data. It has class and frequency attributes.

Bar chart: Based on the data in the frequency table. We can represent the data using bar chart with X-axis as class and Y-axis as Frequency.

Relative frequency table:

- Frequency table consist of both numerical and categorical data. It has class, frequency and relative frequency attributes(it provided the percentage).

Piechart: The representation of the relative frequency table is Piechart.

Frequency distribution table:

- The data is divided into class interval and class interval frequency.

Histogram:

- Histogram is used in the graphical representation of the data distribution
